

**IN THE CLAIMS:**

Please amend paragraph [0044] of the specification as follows, wherein insertions are underlined and deletions are indicated with strikethrough or double brackets.

Paragraph [044]      FIG. 3 is a diagram schematically showing the structure of the first embodiment of the wireless network system according to the present invention. Therein, a first BT module ①, incorporated in the relay device 4a mounted on the first vehicle A, and two BT modules ③ of the portable wireless terminals 3ad and 3ap, structure a first piconet 20. The modules ③ are each attached to the occupants' helmets on the first vehicle A. As will be understood from the foregoing, the network functions independent of a host in that the BT modules perform cable communication irrespective of which is master/slave.
